

EBRAHIM HASHISH

FULL-STACK SOFTWARE ENGINEER (MERN)

SUMMARY

Full-Stack Engineer specializing in the MERN stack, with hands-on experience building production-grade, multi-tenant SaaS platforms. Proven ability to architect secure, scalable backend systems using Node.js, MongoDB, and Redis, alongside responsive frontends with Next.js and React. Currently expanding into PostgreSQL for relational data modeling and NestJS for enterprise-grade architecture.

KEY ACHIEVEMENTS

- Modular Architecture**
Refactored a full-stack monolithic app — decomposing a 1,500+ line single-file backend and oversized frontend pages into clean, reusable MVC modules
- SaaS Development**
Built a full multi-tenant LMS platform with data isolation, auth, payments, and live video from scratch
- Legacy Modernization**
Consistently improved performance and maintainability by refactoring outdated codebases

TRAINING / COURSES

Full-Stack Web Development Diplomas

React.js, Node.js

EXPERIENCE

Freelance

Cairo, Egypt

Full-Stack Developer

01/2024 - Present

Full-Stack Developer specialized in MERN stack

- Designed and deployed production-grade full-stack applications with a focus on scalability, security, and clean architecture
- Refactored a monolithic codebase into a modular architecture, decoupling 5+ core modules and significantly improving maintainability
- Modernized legacy codebases by applying best practices in code organization, reducing technical debt
- Delivered client-ready features using a modern JavaScript stack (Node.js, React, MongoDB, JWT)

PROJECTS

LMS multi-tenant SaaS Platform (Under Active Development)

02/2026 - Present

A production-grade LMS built from the ground up with enterprise-level architecture

- Architected a scalable multi-tenant system with role-based tenant data isolation, ensuring zero cross-tenant data leakage
- Implemented JWT-based authentication with Redis session caching for fast, secure access control
- Tech: Node.js, Express, Next.js, MongoDB, Redis, Socket.IO, Zoom API

Soccer Street — Full-Stack Architecture Refactor

01/2026 - 02/2026

A real-world refactoring challenge transformed into a clean, scalable codebase.

- Decomposed a single-file monolithic backend and frontend (1,500+ lines) into a clean modular MVC architecture
- Improved code reusability and separation of concerns across all application layers
- Tech: React, Node.js, Express, MongoDB, JWT
